Edge Computing

Problem

Companies face network congestion, security concerns, and latency issues as demands for data flow continue to rise within their enterprises. These problems may have serious consequences where critical and timely data flow is required for quality, manufacturing, and operations decision-making.

Solution

The placement of data collection, translation, and manipulation closer to the source of need, can reduce data traffic, provide quicker response times. Edge computing provides lower cost solutions for security, redundancy, and connectivity.

noesis

A proven process management solutions partner, providing data insights and connectivity across any level of an organization to maximize business decision making.
