

Decoupling Data

Problem

The proliferation of information in the manufacturing environment has resulted in siloed reporting of data, misinterpretations of disparate sources of data, and limitations in data consumption and publication.

Solution

Innovations in data management architecture can result in the liberation of data from core manufacturing control systems, transferring data directly to the business level. These advances can bring about information transparency that will create a data-driven decision-making culture.

noesis

A proven process management solutions partner, providing data insights and connectivity across any level of an organization to maximize business decision making.
